8. About Exvul Security

20

1. EXECUTIVE SUMMARY

ExVul Web3 Security was engaged by **TABI** to review smart contract implementation. The assessment was conducted in accordance with our systematic approach to evaluate potential security issues based upon customer requirement. The report provides detailed recommendations to resolve the issue and provide additional suggestions or recommendations for improvement.

The outcome of the assessment outlined in chapter 3 provides the system's owners a full description of the vulnerabilities identified, the associated risk rating for each vulnerability, and detailed recommendations that will resolve the underlying technical issue.

1.1 Methodology

To standardize the evaluation, we define the following terminology based on OWASP Risk Rating Methodology [10] which is the gold standard in risk assessment using the following risk models:

- **Likelihood**: represents how likely a particular vulnerability is to be uncovered and exploited in the wild.
- Impact: measures the technical loss and business damage of a successful attack.
- Severity: determine the overall criticality of the risk.

Likelihood can be: High, Medium and Low and impact are categorized into: High, Medium, Low, Informational. Severity is determined by likelihood and impact and can be classified into five categories accordingly: Critical, High, Medium, Low, Informational shown in table 1.1.

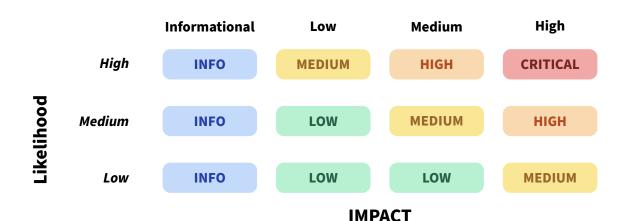

Table 1.1 Overall Risk Severity

To evaluate the risk, we will be going through a list of items, and each would be labelled with a severity category. The audit was performed with a systematic approach guided by a comprehensive assessment list carefully designed to identify known and impactful security issues. If our tool or analysis does not identify any issue, the contract can be considered safe regarding the assessed item. For any discovered issue, we might further deploy contracts on our private test environment and run tests to confirm the findings. If necessary, we would additionally build a PoC to demonstrate the possibility of exploitation. The concrete list of check items is shown in Table 1.2.

- **Basic Coding Bugs**: We first statically analyze given smart contracts with our proprietary static code analyzer for known coding bugs, and then manually verify (reject or confirm) all the issues found by our tool.
- **Code and business security testing**: We further review business logics, examine system operations, and place DeFi-related aspects under scrutiny to uncover possible pitfalls and/or bugs.
- **Additional Recommendations**: We also provide additional suggestions regarding the coding and development of smart contracts from the perspective of proven programming practices.

Category	Assessment Item
Basic Coding Assessment	Apply Verification Control
	Authorization Access Control
	Forged Transfer Vulnerability
	Forged Transfer Notification
	Numeric Overflow
	Transaction Rollback Attack
	Transaction Block Stuffing Attack
	Soft Fail Attack
	Hard Fail Attack
	Abnormal Memo
	Abnormal Resource Consumption
	Secure Random Number

Advanced Source Code	
Scrutiny	Asset Security
	Cryptography Security
	Business Logic Review
	Source Code Functional Verification
	Account Authorization Control
	Sensitive Information Disclosure
	Circuit Breaker
	Blacklist Control
	System API Call Analysis
	Contract Deployment Consistency Check
	Abnormal Resource Consumption
Additional Recommenda-	
tions	Semantic Consistency Checks
	Following Other Best Practices

Table 1.2: The Full List of Assessment Items

To better describe each issue we identified, we categorize the findings with Common Weakness Enumeration (CWE-699) [14], which is a community-developed list of software weakness types to better delineate and organize weaknesses around concepts frequently encountered in software development.

2. FINDINGS OVERVIEW

2.1 Project Info And Contract Address

Project Name	Audit Time	Language
TABI	20/10/2025 - 20/10/2025	Solidity

Repository

https://github.com/tabilabs/tabi-token/tree/main

Commit Hash

94dbcc9bc46d928d87a2cb0478ad26c78cf7efa3

2.2 Summary

Severity	Found	
CRITICAL	0	
нібн	0	
MEDIUM	1	
LOW	1	
INFO	1	

2.3 Key Findings

Severity	Findings Title	Status
MEDIUM	Tokens can be issued unlimitedly	Acknowledge
LOW	Admin centralization risks	Acknowledge
INFO	Zero address check	Acknowledge

Table 2.3: Key Audit Findings

3. DETAILED DESCRIPTION OF FINDINGS

3.1 Tokens can be issued unlimitedly

SEVERITY: MEDIUM STATUS: Acknowledge

PATH:

src/TABIToken.sol

DESCRIPTION:

The mint function can be used to issue tokens and update _totalSupply, but there is no maximum limit, so unlimited issuance may occur.

```
function mint(address to, uint256 amount) external onlyRole(MINTER_ROLE)
  returns (bool) {
    _mint(to, amount);
    return true;
}
```

IMPACT:

Unlimited minting undermines token scarcity, causing severe dilution that can collapse market value and destabilize the project's economic model and incentives.

RECOMMENDATIONS:

Set totalSupply and check if it exceeds the range when mint executes.

3.2 Admin centralization risks

SEVERITY: LOW STATUS: Acknowledge

PATH:

src/TABIToken.sol

DESCRIPTION:

During initialization, the incoming admin address will be granted 3 roles, which means that all permissions are controlled by one person.

```
function initialize(address admin) public initializer {
    __ERC20_init(' 'TABI' ', ' 'TABI' ');
    __ERC20Burnable_init();
    __ERC20Pausable_init();
    __AccessControl_init();
    __UUPSUpgradeable_init();
    _grantRole(DEFAULT_ADMIN_ROLE, admin);
    _grantRole(MINTER_ROLE, admin);
    _grantRole(PAUSER_ROLE, admin);
}
```

RECOMMENDATIONS:

Keep the three permissions separately.

3.3 Zero address check

SEVERITY: INFO STATUS: Acknowledge

PATH:

src/TABIToken.sol

DESCRIPTION:

During initialization and mint, the passed address should be checked for a non-zero value to ensure the validity of the passed parameter.

RECOMMENDATIONS:

Added verification of address(0).

4. CONCLUSION

In this audit, we thoroughly analyzed **TABI** smart contract implementation. The problems found are described and explained in detail in Section 3. The problems found in the audit have been communicated to the project leader. We therefore consider the audit result to be **PASSED**.

To improve this report, we greatly appreciate any constructive feedbacks or suggestions, on our methodology, audit findings, or potential gaps in scope/coverage.

5. APPENDIX

5.1 Basic Coding Assessment

5.1.1 Apply Verification Control

Description	The security of apply verification	
Result	Not found	
Severity	CRITICAL	

5.1.2 Authorization Access Control

Description	Permission checks for external integral functions		
Result	Not found		
Severity	CRITICAL		

5.1.3 Forged Transfer Vulnerability

Description	Assess whether there is a forged transfer notification vulnerability in the	
	contract	
Result	Not found	
Severity	CRITICA	

5.1.4 Transaction Rollback Attack

Description	Assess whether there is transaction rollback attack vulnerability in the		
	contract		
Result	Not found		
Severity	CRITICAL		

5.1.5 Transaction Block Stuffing Attack

Description	Assess whether there is transaction blocking attack vulnerability	
Result	Not found	
Severity	CRITICAL	

5.1.6 Soft Fail Attack Assessment

Description	Assess whether there is soft fail attack vulnerability		
Result	Not found		
Severity	CRITICAL		

5.1.7 Hard Fail Attack Assessment

Description	Examine for hard fail attack vulnerability
Result	Not found
Severity	CRITICAL

5.1.8 Abnormal Memo Assessment

Description	Assess whether there is abnormal memo vulnerability in t	ne contract
Result	Not found	
Severity	CRITICAL	

5.1.9 Abnormal Resource Consumption

Description	Examine whether abnormal resource consumption in contract
	processing
Result	Not found
Severity	CRITICAL

5.1.10 Random Number Security

Description	Examine whether the code uses insecure random number
Result	Not found
Severity	CRITICAL

5.2 Advanced Code Scrutiny

5.2.1 Cryptography Security

Description	Examine for weakness in cryptograph implementation
Result	Not found
Severity	HIGH

5.2.2 Account Permission Control

Description	Examine permission control issue in the contract
Result	Not found
Severity	MEDIUM

5.2.3 Malicious Code Behavior

Description	Examine whether sensitive behavior present in the code
Result	Not found
Severity	MEDIUM

5.2.4 Sensitive Information Disclosure

Description	Examine whether sensitive information disclosure issue present in the	
	code	
Result	Not found	
Severity	MEDIUM	

5.2.5 System API

Description	Examine whether system API application issue present in the code	
Result	Not found	
Severity	LOW	

6. DISCLAIMER

This report is subject to the terms and conditions (including without limitation, description of services, confidentiality, disclaimer and limitation of liability) set forth in the Services Agreement, or the scope of services, and terms and conditions provided to the Company in connection with the Agreement. This report provided in connection with the Services set forth in the Agreement shall be used by the Company only to the extent permitted under the terms and conditions set forth in the Agreement. This report may not be transmitted, disclosed, referred to or relied upon by any person for any purposes without ExVul's prior written consent.

This report is not, nor should be considered, an "endorsement" or "disapproval" of any particular project or team. This report is not, nor should be considered, an indication of the economics or value of any "product" or "asset" created by any team or project that contracts ExVul to perform a security assessment. This report does not provide any warranty or guarantee regarding the absolute bug-free nature of the technology analyzed, nor do they provide any indication of the technologies proprietors, business, business model or legal compliance.

This report should not be used in any way to make decisions around investment or involvement with any particular project. This report in no way provides investment advice, nor should be leveraged as investment advice of any sort. This report represents an extensive assessing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology.

Blockchain technology and cryptographic assets present a high level of ongoing risk. ExVul's position is that each company and individual are responsible for their own due diligence and continuous security. ExVul's goal is to help reduce the attack vectors and the high level of variance associated with utilizing new and consistently changing technologies, and in no way claims any guarantee of security or functionality of the technology we agree to analyze.

8. About Exvul Security

Premier Security for the Web3 Ecosystem

ExVul is a premier Web3 security firm committed to forging a secure and trustworthy decentralized ecosystem. Our elite team consists of security veterans from world-leading technology and blockchain security firms, including Huawei, YBB Captical, Qihoo 360, Amber, ByteDance, MoveBit, and PeckShield. Team member Nolan is ranked as a top-40 whitehat on Immunefi and is the platform's sole All-Star in the APAC region.

Our expertise covers the full spectrum of Web3 security. We conduct **meticulous smart contract audits**, having fortified thousands of projects on chains like Evm, Solana, Aptos, Sui etc. Our **Blockchain Protocol Audits** secure the core infrastructure of L1/L2 by uncovering deep-seated vulnerabilities. We also offer **comprehensive wallet audits** to protect user assets and provide **proactive web3 pentest**, enabling partners to neutralize threats before they strike.

Trusted by industry leaders, ExVul is the security partner for **OKX**, **Bitget**, **Cobo**, **Infini**, **Stacks**, **Aptos**, **Sui**, **CoreDAO**, **Sei** etc.
